

I claim:

1. An audio server system for streaming audio content, comprising:
an audio switch that receives commands from an audio control component and
sends commands to an audio stream source, that receives events from an
audio stream source and sends events to an audio browse list component,
and that controls the switching of audio from the audio stream source to
one or more receivers; and
an audio control component that receives commands from an audio control
synchronous component and sends commands to the audio switch.
